I love this very much its beautiful

Very nice easy to assemble and looks lovely, I put my Arduino board on it and it runs perfectly, just one concern, i add to change the wheels because they were too rubbery, the car hard to turn on those rubber wheels, so i had to put on these yellow ones, I hope they can send me a different sets of wheels. but overall well done? I gave it 4 stars because of the rubber wheels.

Great starter kit, the plastic is very brittle and breaks easily thus the four stars.

Very fun STEM kit for getting started in robotics

Amazon Vine Customer Review of Free Product (What's this?)

My sons and I assembled this car kit and had a great time at it. Despite some of the other reviews, I found the instructions to be very adequate. Yes, you need to download them from Github, but that's common practice for tech items as it allows the designer to modify or expand the instructions over time. It also has code for making the motors work, which you would not want to have to copy from paper.

All parts were included, plus several extras of most. Parts were all placed in individual bags with labels to make assembly easier. There are also all the tools you'll need to finish the project.

Another complaint from reviews was the price. I don't understand this, as the current price is cheaper than if you bought all the parts individually on Amazon. Plus, I think the assembly instructions add a lot of value.

Finally, understand that this isn't a complete robotics kit. It's meant to get you started so you can decide how you want to move forward. I ordered a Raspberry Pi 3B+ and a kit of various sensors. The acrylic chassis has plenty of mounting points, so I'll probably put a proximity sensor on it and see if I can make it somewhat autonomous, and maybe 3D print some parts to make it look nice.

If you're new to programming, a complete kit may be better, but this was just perfect for someone like me who wants to decide for myself how to continue the build and learn as I go!

Amazon Vine Customer Review of Free Product (What's this?)

The for Arduino Robot Car Kit, LK COKOINO 4WD Smart Robot Car Chassis Kit with Motors, Wheels and Battery Case for Arduino/Raspberry pi/Micobit Robot Building arrived & is incredibly well manufactured in durable metal and plastics. It is being used to carry some GoPro cameras around to get a low perspective on subjects and is working out great! Tested just this afternoon it is a winner! Not easy to assemble, but not too difficult either. 5 stars... Recommend!

Not for Beginners

Very few instructions. It does not include the motor you need to operate it. I couldn't find a list of what all I needed to make it work, so I emailed Cokoino and got no response back. I returned it. Very disappointing.

Too expensive for what you get.

I don't like the idea that assembly instructions weren't sent. They left github link in the box, and I cannot open github download, and it is just plain suspicious.

Good product, inaccessible tutorial

This doesn't come with a paper manual. It has a link to a GitHub page, but the file is in a .rar format, which I couldn't figure out how to access

Good Quality, Lacks Instructions

Very good materials and love the way it can be configured in any way. I would say to add instructions for people who aren't too handy or can't just look at a picture and build.
